

The Dream Truth Community (DTC) is Recruiting Legends! (Because we can't do everything ourselves, obviously)

Let's be honest: DTC isn't just another DAO. It's a bloody revolution. We're building the future of transparent governance, where truth is verifiable and every contribution actually matters. For this, we need brilliant minds, nimble fingers, and passionate hearts for our **MRV & Ops Copilot MVP**.

Forget those dreadful, corporate job descriptions. Here, we talk about impact, challenges, and yes, **COLD HARD CASH** (eventually) once we've proven our vision isn't just a pipe dream. Ready to leave your mark on Web3 history? Or at least, make enough to afford decent cheese and wine? Join us.

1. Data Engineer / Python Developer (Core Contributor)

Your Mission (if you're not too busy complaining about the coffee):

- **Event Sourcing Guardian:** You're the plumber-in-chief, transforming the glorious chaos of on-chain/off-chain events into an unalterable source of truth. Because, let's face it, without you, it's just a digital mess.
- **Python Pipeline Maestro:** You'll architect and code robust Python pipelines. Pydantic will be your trusty shield against dodgy data, and DuckDB your rocket engine for lightning-fast analytical queries on terabytes of JSONL. We expect miracles, but on a budget.
- **Bot Whisperer:** Our bots (Tapas Enforcer , Dharma Pulse , Satya Beacon) are our digital minions. You'll make them smarter, more resilient, and generally less prone to existential crises, integrating them perfectly into our data infrastructure.
- **Data Architect Extraordinaire:** If terms like **Data Mesh**, **Lightweight Data Lakehouse**, and **event streaming** don't make you sigh dramatically, then you might just be the masochist we're looking for.

MVP Compensation (Because we're not running a charity, yet): You'll be paid in **D.Flow\$**, our tokens that

burn FIAT to create **D.Worth\$**, our pure, transparent money. Your value is directly tied to your verifiable impact. So, no slacking off, mon ami.

PROD Compensation (When we're swimming in baguettes and crypto): Once the MVP is validated and the DAO is launched, we're talking **€100,000 - €150,000 / year** (or crypto equivalent). Because your brain is worth more than a vintage Bordeaux, and we know it.

2. Data Analyst / Visualization (Reporting & Insights Contributor) 🗺️

Your Mission (because someone has to make sense of this mess):

- **Ecosystem Cartographer:** You're the one who turns our raw `DuckDB` data into strategic narratives and visuals that make people say, "*Incroyable!*" (or at least, "*C'est pas mal*").
- **Impactful Dashboard Creator:** You'll wield `Metabase` (or similar tools) to craft interactive dashboards that allow every DAO member to grasp activity, project performance, and Karma evolution. No more guessing games, just pure, unadulterated data.
- **Insight Detective:** You'll sniff out hidden trends, correlations, and anomalies to guide DTC's strategic decisions. Because sometimes, the truth is hidden deeper than a truffle in Périgord.
- **Data Storyteller Extraordinaire:** Your talent for **data storytelling** and making numbers sing will be crucial for the DAO's clarity and transparency. Make it pretty, make it clear, make it *French*.

MVP Compensation (Because even artists need to eat): You'll be paid in **D.Flow\$**, our tokens that burn FIAT to create **D.Worth\$**, our pure, transparent money. Your value is directly tied to your verifiable impact. So, no vague interpretations, just facts.

PROD Compensation (When we're buying private islands, or at least a nice apartment in Paris): Once the MVP is validated and the DAO is launched, we're talking **€80,000 - €120,000 / year** (or crypto equivalent). Because your analyses are our gold, and we know it.

3. Smart Contract Developer (Blockchain Architect) ⚙️

Your Mission (because trust is for fools, code is for gods):

- **Digital Trust Blacksmith:** Design, develop, and audit our `CosmWasm` contracts to engrave our DAO's logic into the blockchain's immutable stone. No pressure, just the foundation of our entire existence.
- **Governance Architect:** Manage Soulbound NFTs, the Karma system, and on-chain governance mechanisms. Because who needs politicians when you have perfectly executed code?

- **Security & Scalability Guardian: Upgradability via proxy patterns, fund security, and gas optimization** are your playgrounds. If you can make it secure and cheap, we'll build you a statue (probably in crypto).
- **Unassailable System Builder:** If you dream of constructing elegant, unyielding decentralized systems, and you're ready to tackle cryptographic security challenges, your place is with us. We need a fortress, not a *château en Espagne*.

MVP Compensation (Because even gods need a little something): You'll be paid in **D.Flow\$**, our tokens that burn FIAT to create **D.Worth\$**, our pure, transparent money. Your value is directly tied to your verifiable impact. Don't mess it up.

PROD Compensation (When we're dining at Michelin-starred restaurants): Once the MVP is validated and the DAO is launched, we're talking **€110,000 - €160,000 / year** (or crypto equivalent). Because your code is our vault, and we know it.

4. Frontend Developer (UI/UX Alchemist) 🎨

Your Mission (because even a revolution needs a pretty face):

- **User Experience Alchemist:** Transform the daunting complexity of Web3 into a fluid, intuitive, and visually captivating interface. Make it so easy, even a *grand-mère* can use it.
- **dApp Designer & Coder:** Design and code decentralized applications that allow our members to interact seamlessly with our smart contracts, view their Soulbound NFTs, track their Karma, and participate in governance. No friction, just pure digital bliss.
- **JS Framework Master:** Master modern JS frameworks (React, Vue, Svelte), blockchain API integration, and have an obsession for **accessibility** and **responsiveness**. Because a slow website is like a bad mime – nobody wants it.
- **Making Decentralization Desirable:** Your job is to make decentralization simple and sexy for everyone. Make them *want* to join the revolution.

MVP Compensation (Because good taste isn't free): You'll be paid in **D.Flow\$**, our tokens that burn FIAT to create **D.Worth\$**, our pure, transparent money. Your value is directly tied to your verifiable impact. Make it beautiful, make it count.

PROD Compensation (When we're buying designer clothes, not just croissants): Once the MVP is validated and the DAO is launched, we're talking **€90,000 - €140,000 / year** (or crypto equivalent). Because your UX is our shop window, and we know it.

5. Technical Writer / Documentation Specialist (Knowledge Weaver) 🧵

Your Mission (because even geniuses need instructions):

- **Universal Vision Translator:** Transform our cutting-edge technology into crystal-clear, engaging documentation. Make it so simple, even a politician could understand (well, almost).
- **Educational Content Creator:** Write guides for our developers, tutorials for our users, specifications for our smart contracts, and articles for our community. From zero to hero, thanks to you.
- **Complex Concept Popularizer:** Master Markdown, possess pedagogical clarity, and have a knack for popularizing complex concepts (Event Sourcing, CosmWasm, Soulbound NFTs). Because explaining things clearly is a superpower.
- **Transparency & Onboarding Guarantee:** Your work is fundamental for onboarding, transparency, and the long-term success of DTC. Without you, it's just a bunch of smart people talking to themselves.

MVP Compensation (Because clarity is priceless): You'll be paid in **D.Flow\$**, our tokens that burn FIAT to create **D.Worth\$**, our pure, transparent money. Your value is directly tied to your verifiable impact. Make us look good.

PROD Compensation (When we're buying fancy pens, not just Bic): Once the MVP is validated and the DAO is launched, we're talking **€70,000 - €100,000 / year** (or crypto equivalent). Because the clarity of your message is invaluable, and we know it.

6. DAO Strategists (The Bosses: Monkey & Gorilla) 👑

Our Mission (already underway, *bien sûr*): We are the visionaries, the strategists, the architects of the DTC ecosystem. Our job is to set the direction, clear the path, raise the funds, and ensure the Dream Truth Community becomes the global benchmark for decentralization. We're already on deck, working our *derrières* off to make this a reality. Someone has to do the heavy lifting, after all.

PROD Compensation (When we're living the *belle vie*): For us, Monkey and Gorilla, once the DAO is in production and value is created, we're talking **€250,000 - €500,000 / year** (or crypto equivalent) each, with significant stakes in the DAO. Because without vision, there's no revolution, and we're here to make it happen. And we're ready to burn all the FIAT for it. *C'est la vie!*
